

The Drive | Image ScanBOOSTER Edition is the perfect option to start intelligent document scanning using one customized scan profile. With ScanBOOSTER you get the major power and functionality of the Drive | Image Scanner Power Tools and OCR Module to address your basic image capture requirements. This document informs you about the functionality that comes with Drive | Image ScanBOOSTER Edition. To prevent all possible misunderstandings, we prepared a table that compares all features the Drive | Image suite contains (independently from any edition) with those that are actually included in the ScanBOOSTER Edition.

If you're looking to implement specific functions, you can easily search for them in the left-hand column (General Drive | Image Features) and the blue bullets on the right indicate that this feature is available in the ScanBOOSTER Edition. **A cross indicates that this feature is not available within the ScanBOOSTER Edition.**

Please note that we have created this document as a searchable PDF so you can quickly find the information you need (just click the Search button in the Edit menu and type in a keyword).

### Scanner Power Tools

General Drive   Image Features	Included in ScanBOOSTER
Separate your documents with a blank page or with a 1- or 2- dimensional bar code and you'll get separate files at the computer	●
Blank-Page Deletion – Default your scans to duplex mode (two-sided), even for single-sided documents; blank sides are deleted from the job	●
Bates Stamping – To annotate and paginate documents using any kind of text or image	✗
Bates Stamping – To annotate and paginate documents using any kind of text or image, enter or choose Bates profile right at the MFP panel	✗
Image Cleaning – De-skew, de-speckle, and remove lines, punch-hole marks and borders, auto-rotate	●
Scan to network or web folders, or FTP	●
Create static and dynamic scan targets within your network in seconds	●
Auto-create the folder structure on your FTP server (just like you can with your network folders)	●
Print-Back feature – Process your scanned documents and print them out simultaneously	●
Active Directory access control with group capability	●
Job-build – Scan multiple documents into one output file	●
Job-build – Scan multiple documents into one output file, from either the document feeder or the platen glass	●
Define mandatory input fields to ensure required information is entered before starting any process	●
Browse to Folder – Open folder tree, including root folder and subdirectories, at the MFP and limit access to secure directory lists	●
Search for folders by initial letter combination (such as "in" for "invoices" or "Jan" for "January")	●
Browse to Print – Browse your entire network from the MFP panel and immediately print out documents	✗
Modify Scanner Settings option: paper supply (simplex/duplex mode), color mode (color/grayscale/monochrome), and resolution/quality (DPI)	●
User authentication integrated in MS Active Directory	●
Filename Generation – Define your file-naming convention in advance, including using variables	●
Filename Generation – Use any input field that the user can fill out at the MFP side as part of the file name, for example "department-company-document #-date & time.pdf"	●

File Format Conversion – Convert your image files to any standard industry format	●
Add metadata to any scanned document (ASCII, Text, CSV, XML, HP Digital Sender)	●
Run an application after all processing is completed, and pass a variety of parameters to the application to initiate a third-party workflow or document-processing system	●
Send emails using any standard email server using SMTP (Simple Mail Transport Protocol)	●
Emailing supports multiple To, CC, and BCC addresses	●
Email notification feature lets you know when a new document is scanned to a specific destination	●

## OCR Module

General Drivve   Image Features	Included in ScanBOOSTER
Generate a variety of searchable output formats (PDF, RTF, Text, Microsoft Word and Excel) and edit your scanned document with your preferred MS Office application	●
Generate PDF/A output format for the long-term archiving of electronic documents	✘
Use Drivve   Image Zonal OCR to define an unlimited number of zones on a document in order to extract text from specific areas	✘
Use powerful string manipulation and analyze functions on any type of extracted data	●
Auto-rotation of documents scanned in wrong orientation	●
PDF encryption ensures that confidential information remains private	●
Store secured and password-protected PDF documents	●
OCR text export for third-party applications (text, CSV or XML)	●
Scan documents containing different languages all at once with multiple-language support (reads up to 9)	●
Enable OCR right at the scan device, or disable it for unreadable documents such as drawings or photos	●
